Measure & Installation Ways

MEASUREMENT INSTALLATION METHOD

How to Measure

Measure the size of the inside frame (Minimum size)

Customized size: Width(with handle): 30cm~130cm, Height: 20cm~150cm

Tips:

1. Ensure the accuracy of the measuring tool. If the tape head has error, please measured from the 10cm.
2. Notice that the splicing of the section of the sun room may form a small head (not a standard rectangle), so 2 edges should be measured and the taken minimum size.
3. Notice that the profile of the sun roof may be connected by the willow nail. If the outburst part of the willow nail is less than 2MM, it can be measured normally. In the case of 3-5MM, 1-2MM. should be reduced to the overall size.
4. The overall thickness of the hive canopy curtain is 33MM. If the profile depth is less than 33MM, the honeycomb curtain track may be partially prominent.

Installation Methods

01. Take out all the accessories 02. Pass the rope through the shaft 03. Two holes are on the same line 04. Fixed one screw, other 3 angles are also fixed like it

05. Test push and pull after fixed 06. Screw on both sides of the track 07. Installation Success
Fix the curtains in the frame
Take care to avoid the rope to be wear
